

Hunting Trees

Hook

Player-safe note: Walking predatory trees with root legs, hooked branch arms, hollow amber eyes, and bark faces that make ordinary forest scenery feel like it might choose a target.

Observed Form

Predatory walking trees with root legs lifting from the soil, hooked branch arms, moss, lichen, and hollow amber eyes in bark faces.

Behavior

The point where the forest stops being scenery and starts being hungry. They do not hate; they harvest, the way a snare does. The horror is that they only move when you stop watching.

Warning Signs

Fire, the cleared light of the open road, and prey that refuses to scatter.

You Could

- Give it distance before deciding it is hostile.
- Read posture, tracks, and what it is protecting.
